

# Title: Small actions, big change: Helping the environment at school

Our planet needs our help! At school, we can do small things every day to protect the environment. Even if we don't have recycling containers, we can make a difference. Here are some simple steps to take care of our school and help the planet!

1- First, try to use less plastic every day.

2- Then, take a reusable water bottle instead of a plastic one.

3- Then, also bring food containers from home and take them back to wash and reuse them.

4- After that, always reuse the paper for notes or drawings before throwing it away.

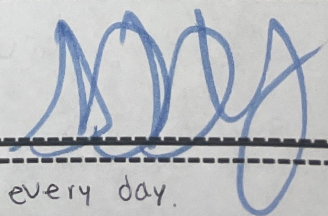

5- Wash plastic bottles or food containers before throwing them in the trash.

6- Later, pick up any garbage you see while walking around the school and put in the canister.

7- Also, encourage your friends to use reusable items such as bottles, bag and containers.

8- Finally, join or create an ecological club to help in school projects on the environment.

We can protect nature if we take small actions every day. Remember, every step you take helps keep our planet clean!
